## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 19 October 2022                             |  |
|---------------|---|--|
| Team ID       | PNT2022TMID29125                            |  |
| Project Name  | Project - IoT Based Safety Gadget For Child |  |
|               | Safety Monitoring & Notification            |  |
| Maximum Marks | 4 Marks                                     |  |
|               |   |  |

## **Technical Architecture:**

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

## Guidelines:

- 1. Include all the processes (As an application logic / Technology Block)
- 2. Provide infrastructural demarcation (Local / Cloud)
- 3. Indicate external interfaces (third party API's etc.)
- 4. Indicate Data Storage components / services
- 5. Indicate interface to machine learning models (if applicable)

**Table-1: Components & Technologies:** 

| S.No | Component           | Description                      | Technology            |
|------|---------------------|----------------------------------|-----------------------|
| 1.   | User Interface      | Web UI, Node-RED, MIT app        | IBM IoT Platform, IBM |
|      |                     |                                  | Node red, IBMCloud    |
| 2.   | Application Logic-1 | Create IBM Watson IoT platform   | IBM Watson, IBM cloud |
|      |                     | and create node-red service      | service ,IBM node-red |
| 3.   | Application Logic-2 | Develop python script to publish | python                |
|      |                     | and subscribe to IBM IoT         |                       |
|      |                     | Platform                         |                       |
| 4.   | Application Logic-3 | Build a web application using    | IBM Node-red          |
|      |                     | node-red service                 |                       |
| 5.   | Database            | Data Type, Configurations etc.   | MySQL                 |
| 6.   | Cloud Database      | Database Service on Cloud        | IBM Cloudant          |
| 7.   | File Storage        | Developing mobile application to | Web UI ,Python        |
|      |                     | store and receivethe sensors     |                       |

|     |                                 | information and to react accordingly   |                                   |
|-----|---------------------------------|--|-----------------------------------|
| 8.  | External API-1                  | Using this IBM child monitoring API we can track the location of the place of child and where the child had been leaved the geofence area. | IBM Weather API, etc.             |
| 9.  | External API-2                  | Using this IBM Sensors it detects the child activity, temperature and provides the information to the parents or caretaker through web UI  | Aadhar API, etc.                  |
| 10. | Machine Learning Model          | Using this we can derive the object recognition model  | Object Recognition Model, etc.    |
| 11. | Infrastructure (Server / Cloud) | Application Deployment on<br>Local System / Cloud Server<br>Configuration  | IBM cloudant, IBM IoT<br>Platform |

**Table-2: Application Characteristics:** 

| S.No | Characteristics          | Description                          | Technology         |
|------|--------------------------|--------------------------------------|--------------------|
| 1.   | Open-Source              | MIT app Inventor                     | MIT License        |
|      | Frameworks               |                                      |                    |
| 2.   | Security Implementations | IBM Services                         | Encryptions, IBM   |
|      |                          |                                      | Controls           |
| 3.   | Scalable Architecture    | sensor-IoT Cloud based               | Technology used    |
|      |                          | architecture                         |                    |
| 4.   | Availability             | Mobile, laptop, desktop              | MIT app            |
| 5.   | Performance              | checking the child's location        | Temparature sensor |
|      |                          | notifications will be generated if   |                    |
|      |                          | the child crosses the geofence.      |                    |
|      |                          | Notifications will be sent           |                    |
|      |                          | according to the child's location to |                    |
|      |                          | their parents or caretakers. The     |                    |
|      |                          | entire location data will be stored  |                    |
|      |                          | in the database.                     |                    |
